

## Dynamometer Testing

{multithumbs}Our proud addition to the newly expanded drive-in facility is the Mustang MD-750 Chassis Dynamometer.

This precisely machined and dynamically balanced unit handles up to 1000 horsepower and 150 mph. The computer control system features full database, data acquisition, graphing, and printing capabilities.

At GCL our Mustang Dyno has been used for various applications including:

- durability testing
- engine cooling system analysis
- high performance tuning
- 1/4 mile top speed and time
- horsepower and torquechecks
- 0-60 mph time
- other vehicle performance tests
- simulated RV trailer weight towing conditions
- simulated RV percentage grade conditions

Call for your Dyno test appointment today!
