

Common Rail Injectors

As Canada's leading fuel injection facility, we are constantly studying and learning to ensure that we stay current with the diesel technology of today and tomorrow. At GCL, we have the advanced equipment necessary to determine the functionality of the new Common Rail systems. We can test automotive applications including Dodge / Cummins 5.9L and 6.7L, Ford 6.4L, and GM 6.6L. Some of the industrial applications we currently test are John Deere, Hino, and Komatsu among others.
