

Test Results

Proven by Independent Testing

Eight major brands of diesel fuel additives as well as a base ultra low sulfur fuel were tested by a leading independent laboratory in three key areas:

- Cetane number (affects ease of starting, noise, power output and emissions)
- Lubricity (critical with today's ultra low sulfur fuels)
- Cold weather protection (against waxing or gelling diesel fuel)

The results shown in the charts are clear — Stanadyne Performance Formula is the best in all three tests.
